

### Description

The MC1XDZC02-HP1 mounting card is designed to host a DZC or DZXC series DigiFlex® Performance™ digital servo drive. The drive plugs into the bottom side of the mounting card, providing a compact assembly with connectors and switches readily accessible. The MC1XDZC02-HP1 is ideal for prototyping and integrating a DZC or DZXC series digital servo drive in your machine.

The MC1XDZC02-HP1 utilizes side-entry right angle fixed screw terminals for the Motor and Power connectors. For vertical-entry quick-disconnect Motor and Power connections use the MC1XDZC02-QD mounting card.

The MC1XDZC02-HP1 is designed to host DZC and DZXC drive models with a 60 amp peak current rating (-060L080 models). Drives with a lower peak current rating may be used with the MC1XDZC02-HP1, although *ADVANCED* Motion Controls recommends the MC1XDZC02 or MC1XDZC02-QD for other drive models.

### LED Functions

The MC1XDZC02-HP1 contains LEDs that indicate DC Power and Logic power supply status. The Power LED will light up when power is applied to P8-Power Connector, and the Logic LED will light up when the +5 VDC Logic Power is applied to P4-I/O Connector.

### Mounting Configuration

Note that a DZ servo drive plugs into the MC1XDZC02-HP1 from the underside of the mounting card to allow easy access to the mounting card switches and connectors. The drive and mounting card assembly can be secured to a panel or heatsink through the mounting holes in the drive baseplate, or with standoffs at the four mounting holes in the corners of the mounting card (standoff height must be at least 22.11mm for DZ-012L080 drive models, and 26.65mm for all other drive models).
