

FD060-60C-RM

FlexPro® Series

Product Status: Active

SPECIFICATIONS

Current Continuous	60 A
DC Supply Voltage	10 – 55 VDC
Network Communication	RS485/232

The **FD060-60C-RM** is a servo drive and development board assembly for a FE060-60C-RM FlexPro® series servo drive with IMPACT™ architecture. Connections to the controller, motor, power, and feedback are simplified through the standard connectors featured on the board. The **FD060-60C-RM** is ideal for prototyping and can be used in production and industrial environments as well.

The **FD060-60C-RM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, stepper motors, and AC induction motors. The drive assembly accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FD060-60C-RM** utilizes an RS485/232 interface for network communication and is configured via USB. All drive and motor parameters are stored in non-volatile memory.

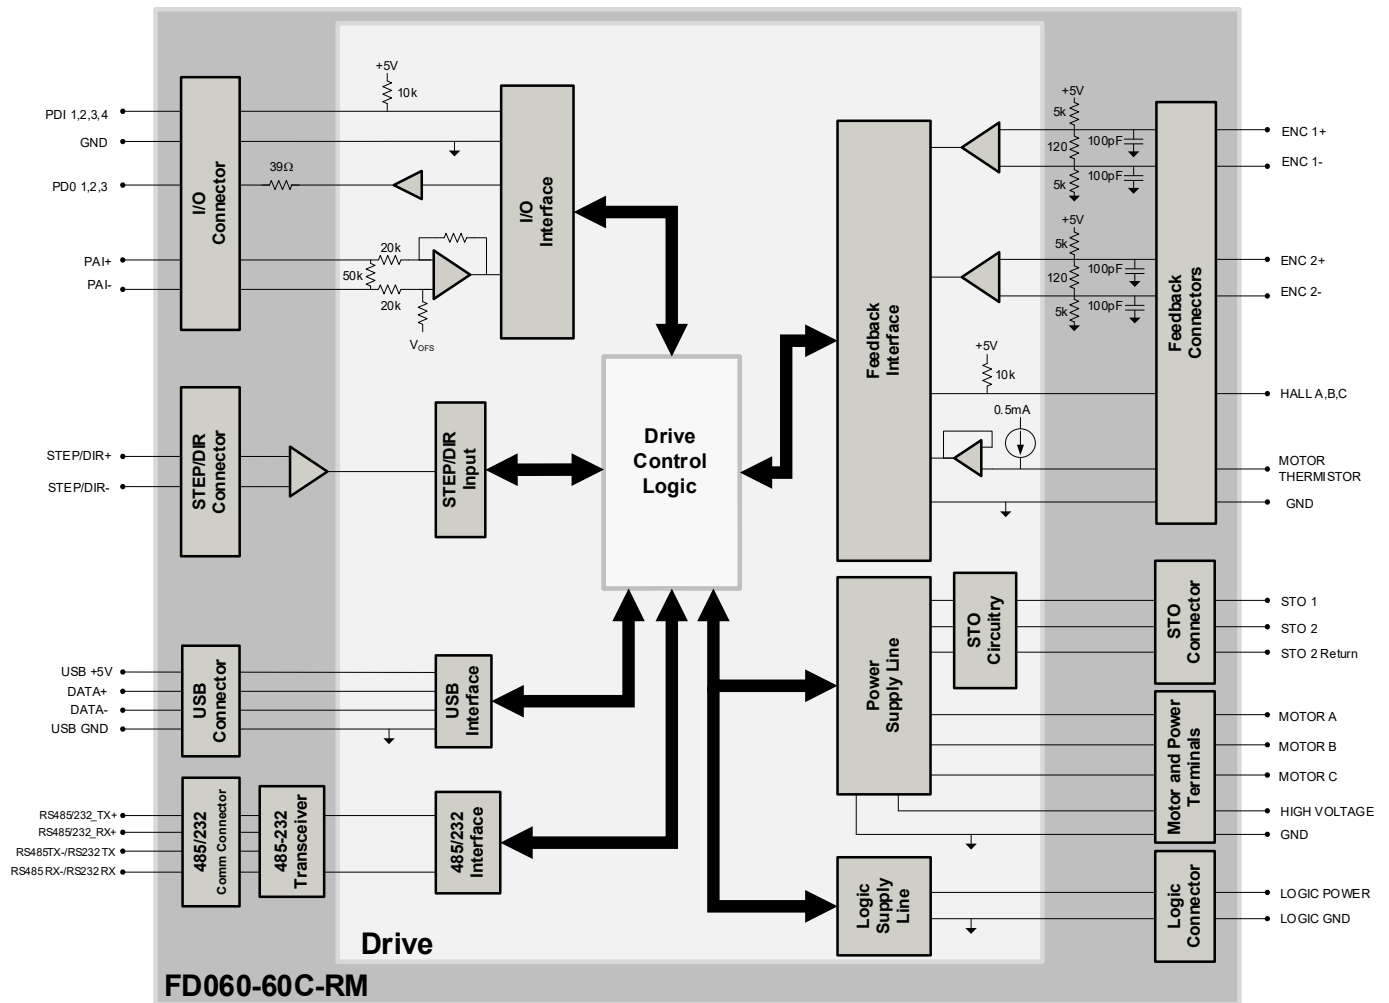

IMPACT™ (Integrated Motion Platform And Control Technology) combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT™ is used in all FlexPro® drives and is available in custom products as well.

FEATURES

- Four Quadrant Regenerative Operation
- Programmable Gain Settings
- PIDF Velocity Loop
- On-the-Fly Mode Switching
- On-the-Fly Gain Set Switching
- Dedicated Safe Torque Off (STO) Inputs
- Bridge Status, Fault and Network Status LEDs
- I/O Status LEDs
- Standard Connections for Easy Setup

Notes

1. Continuous I_{rms} value attainable when RMS Charge-Based Limiting is used.
2. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
3. Maximum motor speed for stepper motors is 600 RPM. Consult the hardware installation manual for 2-phase stepper wiring configuration.
4. Additional cooling and/or heatsink may be required to achieve rated performance. Repeated over temperature events may cause damage to the drive due to the drive's high power density. Ensure that proper thermal management is adhered to during drive operation.

PIN FUNCTIONS

P2 – Logic Power Connector

Pin	Name	Description / Notes	I/O
1	LOGIC PWR	Logic Supply Input (10 – 55VDC) (required)	I
2	LOGIC GND	Ground	GND

BOARD CONFIGURATION

Status LED Functions

LED	Description
STAT	Indicates drive power bridge status. GREEN when DC bus power is applied and the drive is enabled. RED when the drive is in a fault state.
LOGIC PWR	Indicates that logic power is available to the drive. GREEN when logic power is available.
EMA	Indicates whether the Emulated Encoder Output functionality is active. GREEN for Emulated Encoder Output active. OFF for Step & Direction Input or PWM & Direction Input.
SEL	Indicates serial communication mode. GREEN for RS485.

Input/Output LED Functions

LED	Description
DI1 – DI4	Indicates digital input status. GREEN when the corresponding digital input is active.
DO1 – DO3	Indicates digital output status. BLUE when the corresponding digital output is active

DIP Switches

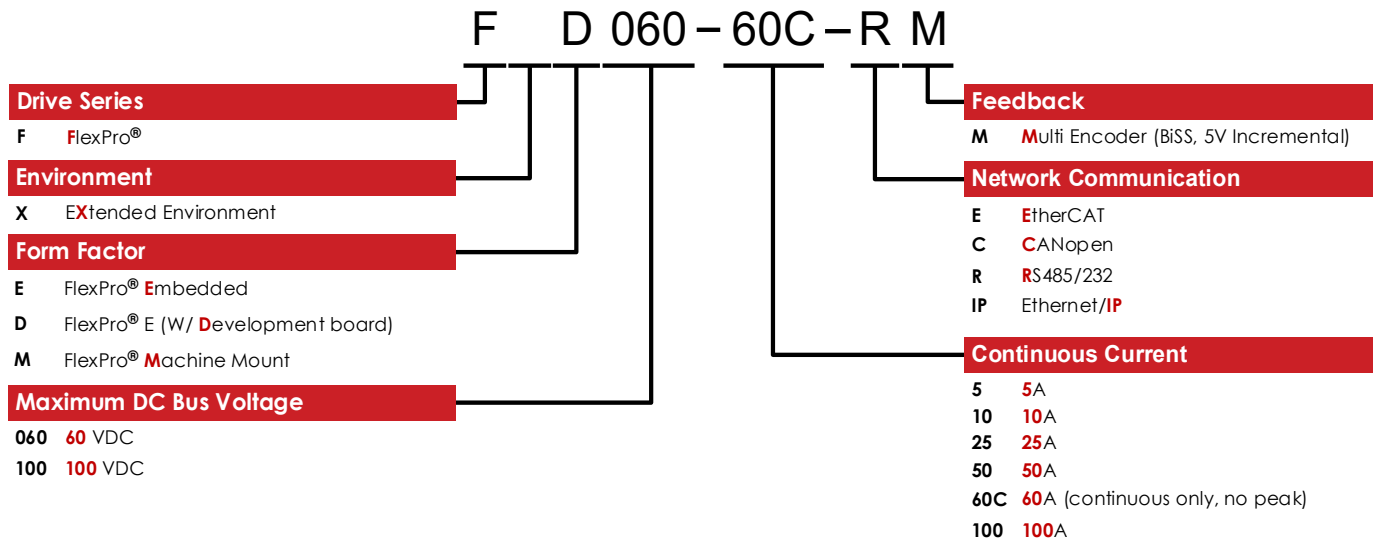

Switch	Description	ON	OFF
SW5	RS232/485 Mode	RS232	RS485
SW6	Motor Thermistor Selection. Note that both switches on SW6 must be set to the same position for proper operation.	Uses the motor thermistor reading from P9 – Feedback 2 Connector	Uses the motor thermistor reading from P10 – Feedback 1 Connector
SW7	RS485 Termination. SW7-1 adds termination to RS485 RX line. SW7-2 adds termination to RS485 TX line.	Terminated	Not terminated
SW8	2/4 Wire Mode. Note that this switch must be OFF for RS232 communication.	2-wire RS485 Mode	4-wire Mode/RS232 Mode
SW10	Serial Communication Selection. Note that all 4 switches of SW10 and SW11 must be set to the same position for proper operation.	RS232/485	-

Safe Torque Off (STO) Inputs

The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by installing the included mating connector for the STO connector and following the STO Disable wiring instructions as given in the hardware installation manual. Consult the hardware installation manual for more information. Alternatively, a dedicated STO Disable Key connector is available for purchase for applications where STO is not in use. Contact the factory for ordering information.

PART NUMBERING AND CUSTOMIZATION INFORMATION

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.
