

# FE060-10-IPM

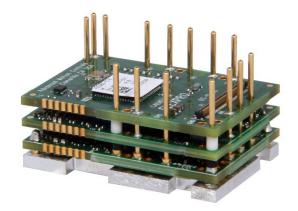

FlexPro® Series

**Product Status:** Active

## **SPECIFICATIONS**

Current Peak
Current Continuous
DC Supply Voltage
Network Communication

20 A
10 A
10 A
10 - 55 VDC
Ethernet/IP

The **FE060-10-IPM** is a FlexPro® series servo drive with IMPACT™ architecture.

The **FE060-10-IPM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, and closed loop stepper motors. The drive accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FE060-10-IPM** utilizes Ethernet/IP network communication and is configured via USB. All drives and motor parameters are stored in non-volatile memory. *ADVANCED* Motion Controls' Ethernet/IP protocol operates based on a control state machine as defined by CANopen standards. CIP Motion and CIP Sync are not currently supported.

IMPACT<sup>TM</sup> (Integrated Motion Platform And Control Technology) combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT<sup>TM</sup> is used in all FlexPro® drives and is available in custom products as well.

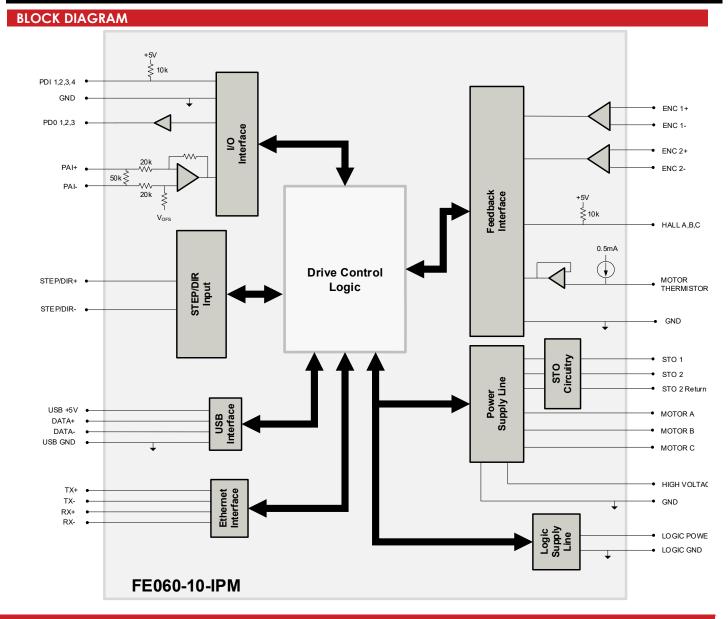

#### **FEATURES**

- Four Quadrant Regenerative Operation
- Programmable Gain Settings
- PIDF Velocity Loop
- Compact Size, High Power Density

- On-the-Fly Mode Switching
- On-the-Fly Gain Set Switching
- Dedicated Safe Torque Off (STO) Inputs
- Space Vector Modulation (SVM) Technology

## **INFORMATION ON APPROVALS AND COMPLIANCES**

US and Canadian safety compliance with UL/IEC 61800-5-1, the industrial standard for adjustable speed electrical power drive systems. UL registered under file number E140173. Note that machine components compliant with UL are considered UL registered as opposed to UL listed as would be the case for commercial products.

Compliant with European EMC Directive 2014/30/EU on Electromagnetic Compatibility (specifically EN 61000-6-4:2007/A1:2011 for Emissions, Class A and EN 61000-6-2:2005 for Immunity, Performance Criteria A). LVD requirements of Directive 2014/35/EU (specifically, EN 60204-1:2019, a Low Voltage Directive to protect users from electrical shock).

The RoHS Directive restricts the use of certain substances including lead, mercury, cadmium, hexavalent chromium and halogenated flame retardants PBB and PBDE in electronic equipment.

| SPECIFICATIONS                                      |          |   |

#### Notes

- 1. Capable of supplying drive rated peak current for 2 seconds with 5 second foldback to continuous value. Longer times are possible with lower current limits.

  2. Continuous Arms value attainable when RMS Charge-Based Limiting is used.

  3. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.

- 4. Maximum motor speed for stepper motors is 600 RPM. Consult the hardware installation manual for 2-phase stepper wiring configuration.
- 5. Additional cooling and/or heatsink may be required to achieve rated performance.

#### \*Mating Connector Kit

Surface mount board connector for P1 and board spacers can be ordered as a kit using ADVANCED Motion Controls' part number KC-MC1XFE01.

### Notes

1. Total current through pins P1-73/75/77 should not exceed 300mA, while no single pin should be loaded more than 150mA.

# **TERMINAL PIN LOCATIONS**

The 15 Terminal Pins provide connection to the high power drive signals. Terminal Pins must be soldered to an interface board.

| Pin | Name        | Description / Notes  | 1/0    |
|-----|-------------|--|--------|
| T1  | STO-1 INPUT | Safe Torque Off - Input 1  | 1      |
| T2  | STO RETURN  | Safe Torque Off Return   | STORET |
| T3  | STO-2 INPUT | Safe Torque Off – Input 2  | I      |
| T4  | LOGIC PWR   | Logic Supply Input (10 – 55VDC) (optional). When using a separate logic power supply, turn on the logic supply first before turning on the main power supply | ı      |
| T5  | HV          | DC Cumply Japan t JO SE VDC) Minimum 500 F outland a graph to a specific debugger JV and DOWED CND   | I      |
| T6  | HV          | DC Supply Input (10 - 55 VDC). Minimum 500µF external capacitance required between HV and POWER GND.   |        |
| T7  | MOTOR C     | Nator Dhaga C. All arguided another phaga quita it pine any et ha used   | 0      |
| T8  | MOTOR C     | Motor Phase C. All provided motor phase output pins must be used.  |        |
| Т9  | GND         | Ground.  | GND    |
| T10 | MOTOR B     | Make Disease D. All associated as a key all associated as a few disease and  | 0      |
| T11 | MOTOR B     | Motor Phase B. All provided motor phase output pins must be used.  |        |
| T12 | GND         | Council  | GND    |
| T13 | GND         | Ground.  |        |
| T14 | MOTOR A     | Motor Phase A. All provided motor phase output pins must be used.  |        |
| T15 | MOTOR A     |  |        |

#### **Terminal Pin Details**

#### Safe Torque Off (STO) Inputs

The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by following the STO Disable wiring instructions as given in the hardware installation manual. Consult the hardware installation manual for more information.

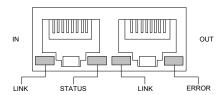

## HARDWARE INFORMATION

### **LED Functionality**

LINK/ACT IN (P1-51); LINK/ACT OUT (P1-52); STATUS (P1-53);

The LINK/ACT IN, LINK/ACT OUT, MOD\_STATUS and NET\_STATUS pins serve as Ethernet/IP network indicators. On a standard RJ-45 connector used with Ethernet/IP network topology, the typical network indicator LED locations are as shown in the below diagrams. Note that the drive features signals for connection to LEDs on an RJ-45 connector, but the connector itself is not included on the drive.

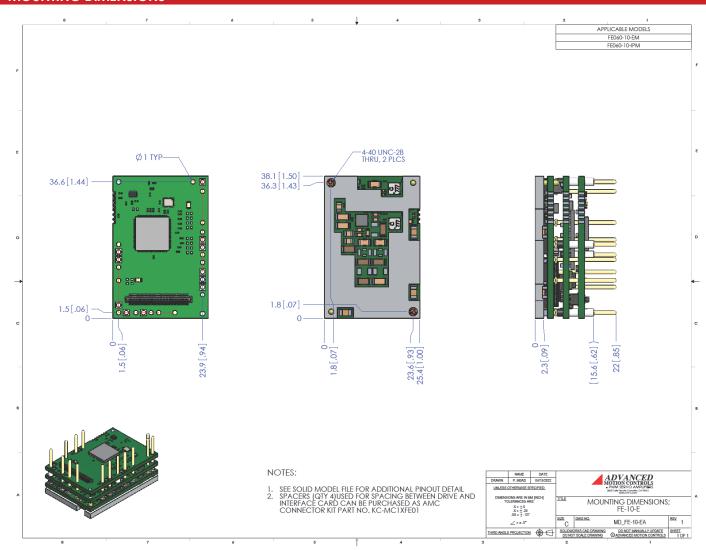

LINK/ACT IN and LINK/ACT OUT are used to drive the corresponding LINK IN and LINK OUT LEDs on a typical RJ-45 connector. The MOD\_STATUS pin is used to drive the Module Status LED, and the NET\_STATUS pin is used to drive the Network Status LED. Consult the hardware installation manual for recommended wiring connections. The LED Function Protocol tables below describe typical LED functionality.

Communication Status LED Functions (on RJ-45 Communication Connectors)

| LED              | Des                | cription                   |  |
|------------------|--------------------|----------------------------|--|
|                  | Off                | No power                   |  |
|                  | Green              | Device Operational         |  |
| AAODUUE STATUS   | Flashing Green     | Standby                    |  |
| MODULE STATUS    | Flashing Red       | Minor Fault                |  |
|                  | Red                | Major Fault                |  |
|                  | Flashing Green/Red | Self-test                  |  |
|                  | Off                | Not powered, no IP address |  |
|                  | Flashing Green     | No connections             |  |
| IETIA/ODK CTATUC | Green              | Connected                  |  |
| NETWORK STATUS   | Flashing Red       | Connection Timeout         |  |
|                  | Red                | Duplicate IP address       |  |
|                  | Flashing Green/Red | Self-test                  |  |

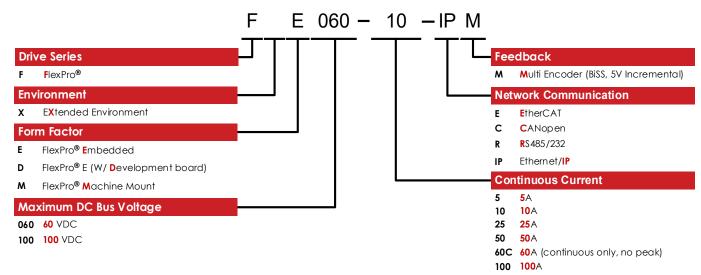

## MOUNTING DIMENSIONS

## PART NUMBERING AND CUSTOMIZATION INFORMATION

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.

#### **Examples of Customized Products**

- Optimized Footprint
- ▲ Private Label Software
- ▲ OEM Specified Connectors
- No Outer Case
- ✓ Increased Current Resolution
- ✓ Increased Temperature Range
- ▲ Custom Control Interface
- Integrated System I/O

- Tailored Project File
- Silkscreen Branding
- Optimized Base Plate
- ▲ Increased Current Limits
- ▲ Increased Voltage Range
- ▲ Conformal Coating
- ▲ Multi-Axis Configurations
- Reduced Profile Size and Weight

Feel free to contact us for further information and details!

#### **Available Accessories**

ADVANCED Motion Controls offers a variety of accessories designed to facilitate drive integration into a servo system. Visit <a href="https://www.a-m-c.com">www.a-m-c.com</a> to see which accessories will assist with your application design and implementation.
