The **FM060-45C-EM** is a single-axis servo drive and integration board assembly for a FE060-45C-EM FlexPro® series servo drive with IMPACT™ architecture. Connections to the controller, motor, power, and feedback are simplified through the standard connectors featured on the board.

The **FM060-45C-EM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, and closed loop stepper motors. The drive accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FM060-45C-EM** utilizes EtherCAT® network communication using CANopen over EtherCAT (CoE) and is configured via USB. All drive and motor parameters are stored in non-volatile memory.

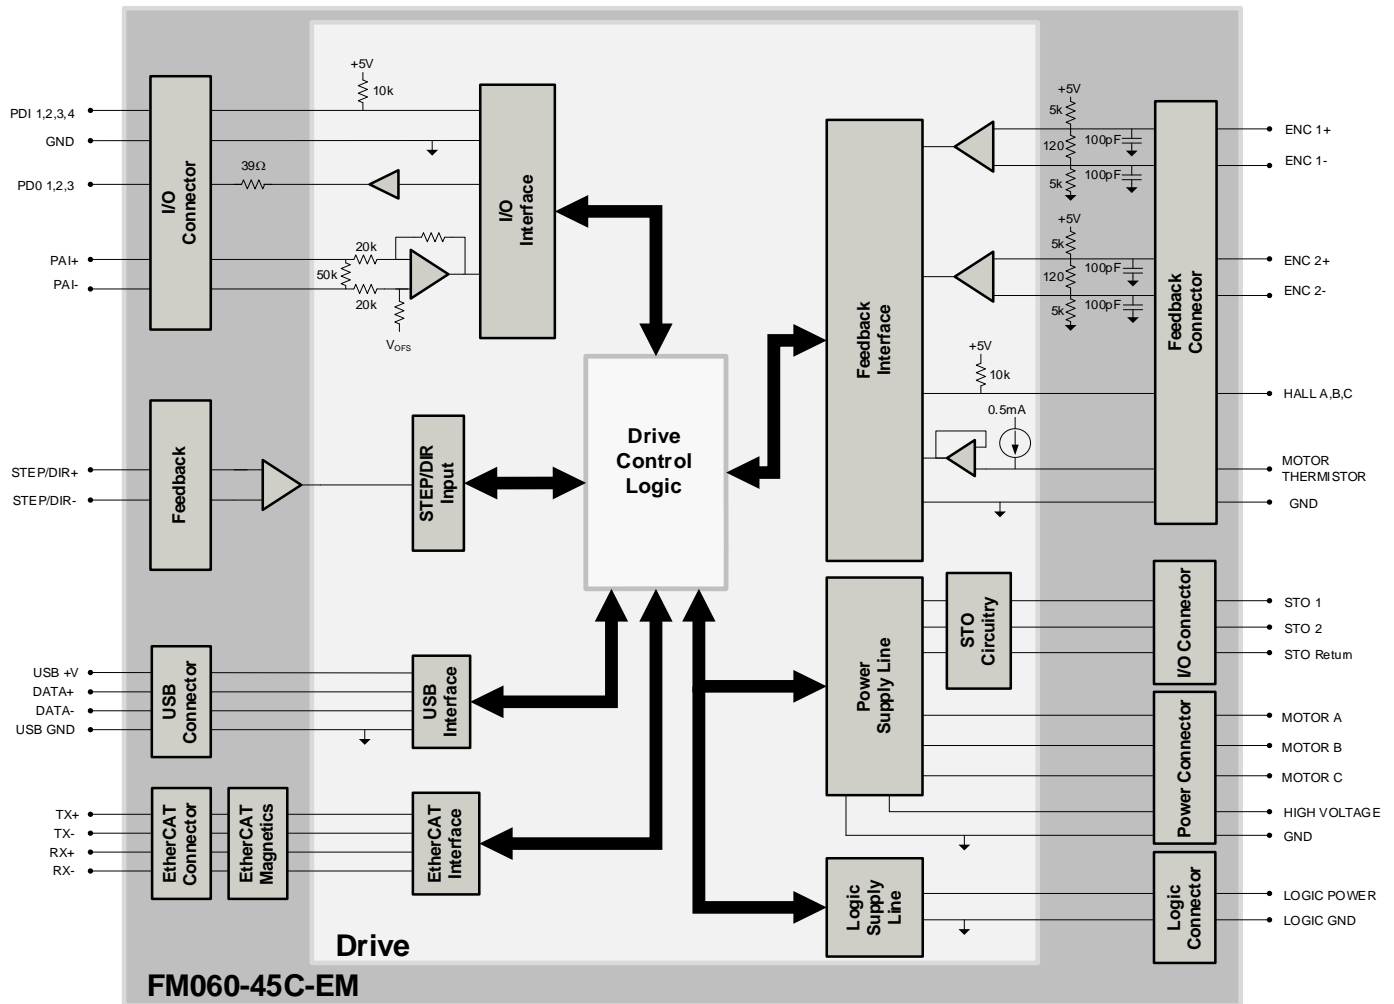

IMPACT™ (Integrated **M**otion **P**latform **A**nd **C**ontrol **T**echnology) combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT™ is used in all FlexPro® drives and is available in custom products as well.

ETHERCAT STATUS	Valid Link - No Activity
	Valid Link - Network Activity
	Invalid Link
	The device is in the state OPERATIONAL
	The device is in the state PRE-OPERATIONAL
	The device is in state SAFE-OPERATIONAL
ERROR	The device is booting and has not yet entered the INIT state or The device is in state BOOTSTRAP or Firmware download operation in progress
	The device is in state INIT
	A PDI Watchdog timeout has occurred. Example: Application controller is not responding anymore. General Configuration Error.
	Example: State change commanded by master is impossible due to register or object settings.
	Booting Error was detected. INIT state reached, but parameter "Change" in the AL status register is set to 0x01:change/error Example: Checksum Error in Flash Memory.
	The slave device application has changed the EtherCAT state autonomously: Parameter "Change" in the AL status register is set to 0x01:change/error. Example: Synchronization error; device enters SAFE-OPERATIONAL automatically
	An application Watchdog timeout has occurred. Example: Sync Manager Watchdog timeout.

### Address Selection

The drive Station Alias is set via the EtherCAT network or with the setup software. Note that drives on an EtherCAT network will be given an address automatically based on proximity to the host.

### Safe Torque Off (STO) Inputs

The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by following the STO Disable wiring instructions as given in the hardware installation manual.

### Mating Connector Kit

Mating connector housing and crimp contacts can be ordered as a kit using ADVANCED Motion Controls' part number KC-MC1XFM01.
