

**Description**

The S30A40 PWM servo drive is designed to drive three phase brushless motors with sine wave current at a high switching frequency. The drive requires two sinusoidal command signals with a 120-degree phase shift (external commutation). The phase angle must correspond to the position of the motor rotor, while the signal amplitude controls the motor torque. The S30A40 interfaces directly with digital controllers. The drive is fully protected against over-voltage, over-current, over-heating, and short-circuits, and requires only a single unregulated DC power supply (all logic and control voltages are generated internally). A red/green LED and two digital outputs indicate operating status. All signal inputs and outputs are optically isolated from the power section to eliminate the need for a transformer coupled power supply.

See Part Numbering Information on last page of datasheet for additional ordering options. The hardware installation manual for the analog drive family is available for download at [www.a-m-c.com](http://www.a-m-c.com).

**Power Range**

Peak Current	30 A (21.2 A <sub>RMS</sub> )
Continuous Current	15 A <sub>RMS</sub>
Supply Voltage	60 - 400 VDC

**Features**

- ▲ Optical Isolation Between High & Low Power Signals
- ▲ Four Quadrant Regenerative Operation
- ▲ Adjustable Current Limits
- ▲ High Switching Frequency
- ▲ Differential Input Command
- ▲ Selectable Inhibit/Enable Logic
- ▲ Digital Fault Output Monitor
- ▲ Sinusoidal Current Output
- ▲ Adjustable Input Gain
- ▲ DIP Switch Selectable Tuning
- ▲ Drive Status LED
- ▲ No Crossover Distortion

**MODES OF OPERATION**

- Current

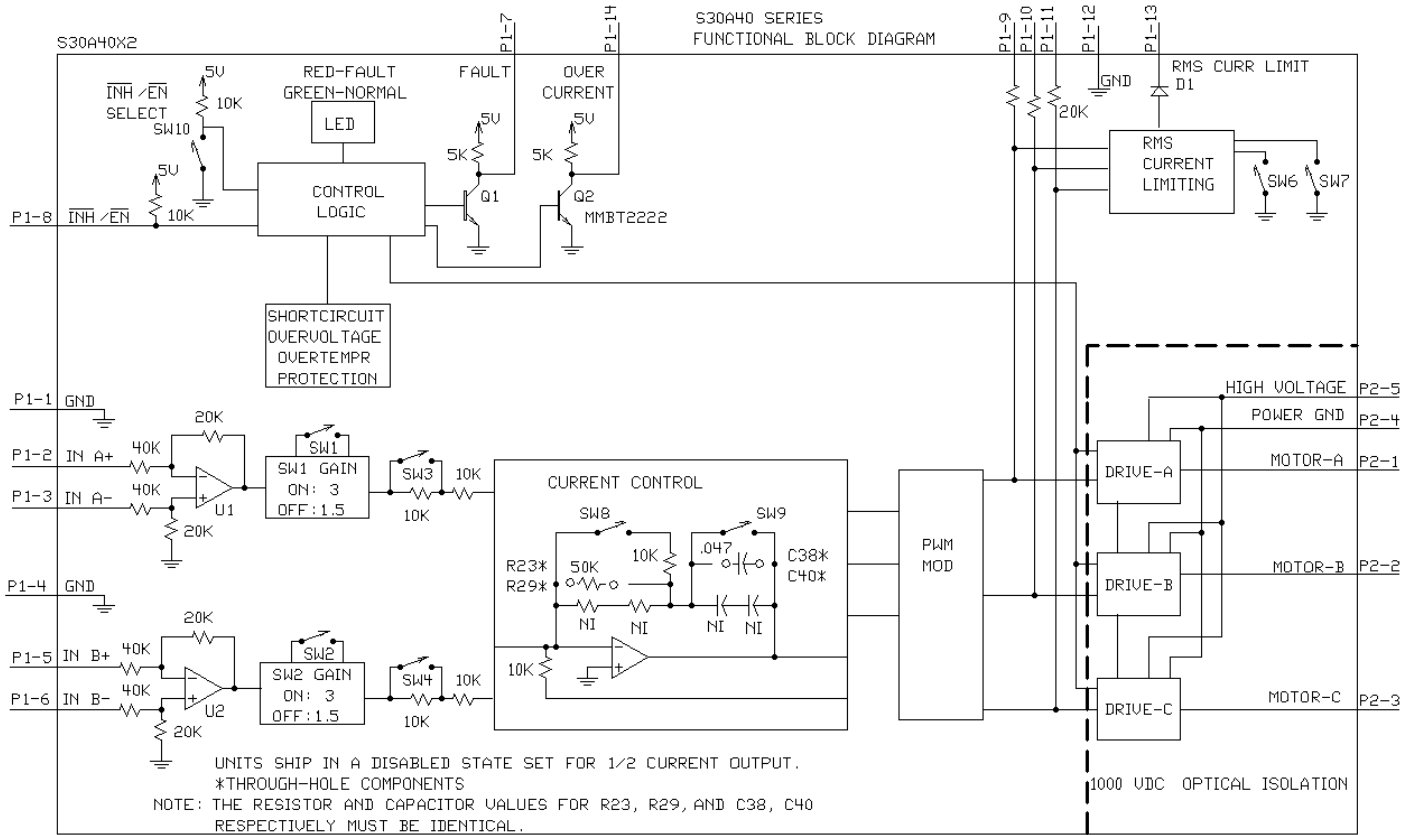

**COMMAND SOURCE**

- 120° Sine

**COMPLIANCES & AGENCY APPROVALS**

- UL
- cUL
- CE Class A (LVD)
- CE Class A (EMC)
- RoHS II

**BLOCK DIAGRAM**

**Information on Approvals and Compliances**

	<p>US and Canadian safety compliance with UL 508c, the industrial standard for power conversion electronics. UL registered under file number E140173. Note that machine components compliant with UL are considered UL registered as opposed to UL listed as would be the case for commercial products.</p>
	<p>Compliant with European EMC Directive 2004/108/EC on Electromagnetic Compatibility (specifically EN 61000-6-4:2007 for Emissions, Class A and EN 61000-6-2:2005 for Immunity, Performance Criteria A). LVD requirements of Directive 2006/95/EC (specifically, EN 60204-1:2004, a Low Voltage Directive to protect users from electrical shock).</p>
	<p>The RoHS II Directive 2011/65/EU restricts the use of certain substances including lead, mercury, cadmium, hexavalent chromium and halogenated flame retardants PBB and PBDE in electronic equipment.</p>

**SPECIFICATIONS**

Description		Power Specifications		Value
		Units		
DC Supply Voltage Range		VDC	60 - 400	
DC Bus Over Voltage Limit		VDC	420	
Maximum Peak Output Current <sup>1</sup>		A	30	
Maximum Continuous Sine Wave Current		Arms	15	
Maximum Continuous Output Powe		W	5700	
Maximum Power Dissipation at Continuous Current		W	300	
Minimum Load Inductance (Line-To-Line) <sup>2</sup>		µH	600	
Switching Frequency		kHz	22	

Description		Control Specifications		Value
		Units		
Command Sources		-	120° Sine	
Commutation Methods		-	Sinusoidal	
Modes of Operation		-	Current	
Motors Supported		-	Three Phase (Brushless)	
Hardware Protection		-	Over Current, Over Temperature, Over Voltage, Short Circuit (Phase-Phase & Phase-Ground)	
Primary I/O Logic Level		-	5V TTL	

Description		Mechanical Specifications		Value
		Units		
Agency Approvals		-	CE Class A (EMC), CE Class A (LVD), cUL, RoHS II, UL	
Size (H x W x D)		mm (in)	203.2 x 142.9 x 40.7 (8 x 5.6 x 1.6)	
Weight		g (oz)	990 (34.9)	
Heatsink (Base) Temperature Range <sup>3</sup>		°C (°F)	0 - 65 (32 - 149)	
Storage Temperature Range		°C (°F)	-40 - 85 (-40 - 185)	
Form Factor		-	Panel Mount	
P2 Connector		-	5-contact, 11.10 mm spaced, tri-barrier terminal block	
P3 Connector		-	15-pin, female D-sub	

**Notes**

1. Maximum duration of peak current is ~2 seconds.
2. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
3. Additional cooling and/or heatsink may be required to achieve rated performance.

**PIN FUNCTIONS**

P2 - Power Connector			
Pin	Name	Description / Notes	I/O
1	MOTOR A	Motor Phase A	O
2	MOTOR B	Motor Phase B	O
3	MOTOR C	Motor Phase C	O
4	POWER GND	Power Ground (Isolated From Signal Ground)	PGND
5	HIGH VOLTAGE	DC Power Input	I

P3 - Signal Connector			
Pin	Name	Description / Notes	I/O
1	SIGNAL GND	Signal Ground	SGND
2	+REF-IN-A	Differential reference input, maximum ±10 V, 40K input resistance	I
3	-REF-IN-A		I
4	SIGNAL GND	Signal Ground	SGND
5	+REF-IN-B	Differential reference input, maximum ±10 V, 40K input resistance	I
6	-REF-IN-B		I
7	FAULT OUT	TTL level (+5 V) output becomes high when power devices are disabled due to at least one of the following conditions: inhibit, output short circuit, over voltage, over temperature, power-up reset.	O
8	INHIBIT/ENABLE IN	TTL level (+5 V) inhibit/enable input. Pull to ground to enable drive (SW10-OFF). Pull to ground to inhibit drive (SW10-ON). Inhibit turns off all power devices.	I
9	CURR MONITOR A OUT	Phase Current Monitor. 7.25 V = amplifier peak rated current .	O
10	CURR MONITOR B OUT		O
11	CURR MONITOR C OUT		O
12	SIGNAL GND	Signal Ground	SGND
13	RMS CURRENT LIMIT	The RMS current limit can be controlled by an external voltage; 5 V = maximum RMS current limit. This is referenced to Signal Ground. No input to this pin is necessary to obtain maximum current.	I
14	OVER-CURRENT FAULT OUT	This transistor output becomes high if RMS current (in any phase) exceeds RMS current limit. This creates a fault condition. Drive will re-enable when the RMS current returns to values within the RMS current limit range.	O
15	NC	Not Connected (Reserved)	-

## HARDWARE SETTINGS

### Switch Functions

Switch	Description	Setting	
		On	Off
1	Input range selection. Input range can be set to $\pm 5$ V or $\pm 10$ V. Must be set the same as switch 2.	$\pm 5$ V	$\pm 10$ V
2	Input range selection. Input range can be set to $\pm 5$ V or $\pm 10$ V. Must be set the same as switch 1.	$\pm 5$ V	$\pm 10$ V
3	Peak Current Limit. Sets the peak current limit to 50% or 100% of the maximum peak current. Must be set the same as switch 4.	100%	50%
4	Peak Current Limit. Sets the peak current limit to 50% or 100% of the maximum peak current. Must be set the same as switch 3.	100%	50%
5	Reserved Function	-	-
6	Bit 0 of binary value for RMS current limit setting. See details below.	1	0
7	Bit 1 of binary value for RMS current limit setting. See details below.	1	0
8	Current loop proportional gain adjustment. ON by default.	Decrease	Increase
9	Current loop integral gain. Activates or deactivates integration. OFF by default.	Inactive	Active
10	Inhibit logic. Sets the logic level of inhibit pins.	Active Low	Active High

### Additional Details

Switches 1 & 2, and switches 3 & 4 must be set the same. Switches 6 and 7 can be used to reduce the continuous current limit to a percentage given in the table below. 100% means no reduction.

% Of Maximum Continuous Current Limit	Switch 6	Switch 7
25	OFF	OFF
50	ON	OFF
100	OFF	ON
	ON	ON

### Through-hole Components<sup>†</sup>

Location	Description
C38*	Current Loop Integrator. Two identical through-hole capacitors that can be added for more precise current loop tuning. See section below on Tuning with Through-hole components for more details.
C40*	
R23*	Current Loop Proportional Gain. Two identical through-hole resistors that can be added for more precise current loop tuning. See section below on Tuning with Through-hole components for more details.
R29*	

### Tuning With Through-hole Components

In general, the drive will not need to be further tuned with through-hole components. However, for applications requiring more precise tuning than what is offered by the potentiometers and dipswitches, the drive can be manually modified with through-hole resistors and capacitors as denoted in the above table. By default, the through-hole locations are not populated when the drive is shipped. Before attempting to add through-hole components to the board, consult the section on loop tuning in the installation notes on the manufacturer's website. Some general rules of thumb to follow when adding through-hole components are:

- A larger resistor value will increase the proportional gain, and therefore create a faster response time.
- A larger capacitor value will increase the integration time, and therefore create a slower response time.

Proper tuning using the through-hole components will require careful observation of the loop response on a digital oscilloscope to find the optimal through-hole component values for the specific application.

<sup>†</sup>**Note: Damage done to the drive while performing these modifications will void the warranty.**

**MECHANICAL INFORMATION**

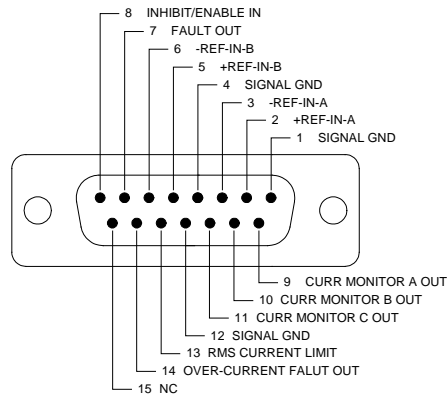

**P2 - Power Connector**

Connector Information		5-contact, 11.10 mm spaced, tri-barrier terminal block
Mating Connector	Details	Not applicable
	Included with Drive	Not applicable

**P3 - Signal Connector**

Connector Information		15-pin, female D-sub
Mating Connector	Details	TYCO: Plug P/N 205206-3; Housing P/N 5745172-1; Terminals P/N 1658540-5 (loose) or 1658540-4 (strip)
	Included with Drive	No

**MOUNTING DIMENSIONS**

**PART NUMBERING INFORMATION**

\* Options available for orders with sufficient volume. Contact *ADVANCED* Motion Controls for more information.

*ADVANCED* Motion Controls analog series of servo drives are available in many configurations. Note that not all possible part number combinations are offered as standard drives. All models listed in the selection tables of the website are readily available, standard product offerings.

*ADVANCED* Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, *ADVANCED* Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.

**Examples of Modifications and Customized Products**

- |   |  |
|---|--|
| <ul style="list-style-type: none"> <li>▲ Integration of Drive into Motor Housing</li> <li>▲ Mount OEM PCB onto Drive Without Cables</li> <li>▲ Multi-axis Configuration for Compact System</li> <li>▲ Custom PCB and Baseplate for Optimized Footprint</li> <li>▲ RTV/Epoxy Components for High Vibration</li> <li>▲ OEM Specified Connectors for Instant Compatibility</li> <li>▲ OEM Specified Silkscreen for Custom Appearance</li> <li>▲ Increased Thermal Limits for High Temp. Operation</li> </ul> | <ul style="list-style-type: none"> <li>▲ Integrate OEM Circuitry onto Drive PCB</li> <li>▲ Custom Control Loop Tuned to Motor Characteristics</li> <li>▲ Custom I/O Interface for System Compatibility</li> <li>▲ Preset Switches and Pots to Reduce User Setup</li> <li>▲ Optimized Switching Frequency</li> <li>▲ Ramped Velocity Command for Smooth Acceleration</li> <li>▲ Remove Unused Features to Reduce OEM Cost</li> <li>▲ Application Specific Current and Voltage Limits</li> </ul> |
